

ProTecta Spray Lube

Industrial grade lubricant that you can use in the house, garage and shop. In laboratory tests, ProTecta with its extreme pressure additives withstands 5 times the lubricating pressure of the leading brands to eliminate squeaks and lubricate longer. ProTecta's advanced formula provides a superior lubricating film that continues to provide protection when the oil dries. It adheres to metal better than other spray lubricants, and it cleans most surfaces and quickly penetrates and loosens frozen or rusted metal parts.

Makes all other spray oils obsolete! Resists water and drives moisture from working surfaces. Evaporates leaving a protective, long lasting, non-sticky, dust-free film.

BENEFITS:

- Cleans
- Protects 5 Times Better Than The Leading Brand
- Displaces Water
- Dries leaving non-sticky protective film
- Long Lasting

ProTecta Spray Lube is a specially formulated product, where the majority of lubricant applied will actually bond onto the metal. ProTecta is engineered to dry thus minimizing the dust that sticks with the lubricant. Unlike competitive products that leave a heavy wet surface, ProTecta dries leaving a light but strong film.

ProTecta is compatible with plastic, whereas most other lubricants are not. Because of its unique drying agents it allows superior protection for chains such as on dirt bikes, equipment chains, etc. It can be used anywhere you need lubrication in a light spray form. And its ability to take pressure allows for use on trailer hitches and other similar applications. Its uses are endless, and with its superior cleaning it will even cut through the toughest oil residue and grease.

ProTecta Spray Lube is an all-purpose spray lubricant, that is highly fortified for superior performance.

Question:

How can ProTecta Spray Lube take so much pressure when the product seems to dry onto the metal?

Answer:

Unlike leading competitive products that use light oils for their main lubricating formula, ProTecta employs extreme pressure additives. The extreme pressure additives in ProTecta actually bond to the metal. Once they are onto the metal they are able to take heavy loads of friction. The unique engineering of this product is that ProTecta dries onto the metal thus not attracting dust and dirt like other products. Some people think that the product is gone, whereas it is still functioning. ProTecta is excellent for chains and other applications where dust and dirt is a concern. When compared to the leading brand on a Timken Test Device, the leading brand will withstand 150 lbs. of pressure with seizure of the test bearing. This is 30 lbs. more than dry. On the other hand, ProTecta will go over 600 lbs with almost no wear on the test bearing. For heavy use to reduce friction and squeaks use ProTecta.
